

Product Requirements Document (PRD)

Sonocea® Mobile App v1.0 [REVISED]

Status: Draft for internal review

Author: Ryan Schmaltz (ryan@soncea.com)

Last updated: June 28, 2026

Audience: Product, Design, Engineering, Legal, Research, GTM

Contents

Section 1: Sonocea Vision, Mission, & Proposition

Vision

Unleash the scientific power of sound to transform lives for the better.

Mission

It's our mission to power sonic experiences that unlock the potential of sound to enhance and improve lives all over the world.

We call it –The Sonic Revolution.

Brand Proposition

Sonocea delivers patented sonic augmentation technology that provides an unparalleled impact on body and mind.

Scientific Foundation

Recent study findings at the University of Florida Medical School demonstrate that Sonocea Sonic Augmentation Technology™ (SAT™) produces immediate, statistically significant effects on autonomic and emotional regulation. Within just 15 minutes of listening, participants showed:

- - Increased oxytocin levels and improved biobehavioral state regulation
- Significant reductions in anxiety, irritability, worry, physical pain, and tension
- Enhanced calmness, peacefulness, and relaxation
- The greatest improvements among individuals with higher baseline stress, anxiety, or depression

These results confirm Sonocea SAT™ as an effective and measurable tool for enhancing autonomic regulation and emotional balance, validated through both biochemical (oxytocin) and subjective (self-reported calm) outcomes.

Section 2: Goals & Success Criteria of Version 1.0 of Sonocea Mobile App

Primary Goals for v1.0

1. Create and release a commercial Sonocea mobile application.
2. Safely invite, authenticate, and provision selected users to access Sonocea sessions.
3. Deliver a premium, on-brand listening experience through a simple, stable mobile app.
4. Protect content IP through secure streaming and encrypted offline playback.
5. Capture essential engagement analytics for investor and customer conversations.
6. Ability to track usage to support multiple billing models including site license with a set number of seats, per seat pricing, and usage based pricing with configurable rate cards.

Success Criteria for Version 1.0

1. Admins can invite and manage users and content access.
2. Users can self-onboard, understand what to listen to, and play sessions seamlessly.
3. Content is never accessible outside the app and cannot be shared or extracted.
4. Analytics on Dashboard surfaces invite acceptance, listening habits, completion, device metadata, and Organization-linked usage for billing.
5. Data collection and dashboard tracks real-time usage at Organization and Listener levels for billing and actionable product insights.
6. App includes a feedback mechanism to obtain qualitative feedback from Listeners for specific pre-defined Listener driven triggers or app events.

Section 3: In-Scope for Version 1.0

Platforms

iOS and Android mobile app - shared framework (non-native)

Core Components

- **Mobile App:**
 - General public landing, learning, CTA:
 - Logo, play video, inform audience of Sonocea technology
 - No ability to listen to Sessions
 - Invite provisioned listening app with neurotype onboarding, session discovery, on-brand player, and About page with policy links.
- **Admin Dashboard:**
 - REST API: Catalog, provisioning, user auth, invite lifecycle, telemetry capture.
 - Admin CMS: Web UI for Sonocea Admins to upload sessions, manage access, setup a client Organization, and view analytics. See [Appendix D](#) for details on the current Admin dashboard.
 - Analytics Dashboard: Events collection and minimal reporting via built-in dashboards, visualizations, and CSV exportable data.

Definitions of User Roles

Sonocea “Admin”:

Manages content, Listener invites, manage access to Listeners when needed, and usage data and analytics.

Sonocea “Partner” or “Organization”:

Organizations that specific Listeners are affiliated with by Admin. Partner will notify Admin of distribution list of Sonocea and Sonocea will distribute access to the app.

Sonocea “Listener”:

The end user who has access to Sonocea listens to the sessions provided to them.

Other Definitions

Sonocea “Session”:

The specific audio track containing Sonocea’s proprietary technology that is listened to by the Listener.

“Group”:

A group of Sessions by type or tag or purpose or organization. For example, a group will be neurotype: neurotypical, low needs neurodivergent, and high needs neurodivergent. Other future groups may include gender, age, animal type, time of day, mood or symptoms, etc. Or, specific sessions for a specific client. Or sessions that address a specific need (ex. Unwind, Rest, Recovery, etc.)

“Regiment” or “Protocol”

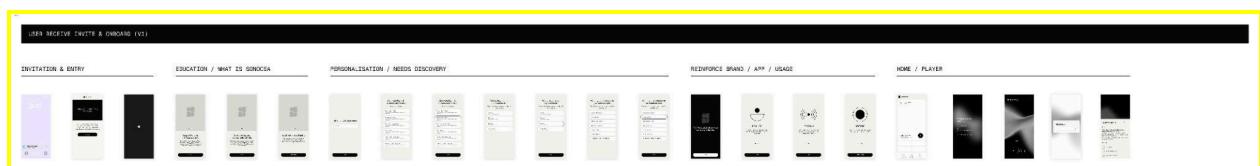

A prescription of listening to multiple sessions over a period of time.

Section 4: UX & UI

List of Mobile App Screens

1. Splash and brand intro
 - a. [See Public Visitor PRD for Non-Authenticated User Experience](#)
2. Sign-up, Login with invite link or pre-registered email address
3. Onboarding and science education
4. Neurotype Questionnaire
5. Soncea Sessions Library
6. Sonocea Favorites
7. Session Overview / Profile
8. Player
9. About Sonocea
10. Feedback
11. Support
12. [etc]

Wireframe Designs

Section 5: User Stories

Stories: Sonocea Admin

As a Sonocea Admin, I need to:

1. Upload and manage sessions with metadata and tags so that content is organized and discoverable.
2. Setup and manage Sonocea Partners or Organizations including Partner-level content bundles and associating a Listener to a Partner.
3. View usage insights by Listeners, by Organization/Partner, by Session, by tags, by Session categories or other meta data. This may include:
 - a. invite acceptance,
 - b. session starts and completions,
 - c. total listening time,
 - d. MAU/DAU, frequency of listening,
 - e. most popular Sessions by neurotype
 - f. Etc.

Sonocea Admin Acceptance Criteria:

- I can upload and publish a session and assign it to a Partner either as an individual Session or as a Session Group.
- I can invite an individual Listener directly and associate them to a Partner or Organization that the Listener is affiliated with.

- I can view aggregate, Partner-level usage, or Listener-level usage and be able to filter usage for a date range to support invoicing, monitoring usage trends, user behavior and overall adoption.

Stories: Sonocea Partner

As a Sonocea Partner, I need to:

1. Notify and engage Sonocea Admins to distribute access to Sonocea for my organization or clients.
2. Understand and aggregate usage data, listening trends, or other insights of Listeners who I elect to provide access to.
3. Directly correlate the number of listeners assigned to my organization, their identifying information, my listeners usage in order to substantiate the invoice I received from Sonocea.

Partner Acceptance Criteria:

- Partner affiliated Listeners receive and are able to access the app
- Partner affiliated Listeners have access to Sessions specifically provisioned to them as per the relationship between Partner and Sonocea.
- Partner affiliated Listeners are associated to Partner for data analytics, and other tracking for dashboards and usage data.

Stories: Listener

As a Listener, I need to:

1. Redeem an invite and gain access to the Sonocea app
2. Complete the app onboarding process that:
 - a. Provide my identifying information
 - b. aligns specific Sessions to my neurotype
 - c. Informs me about Sonocea and optimal listening approaches
 - d. (this information to be provided in wireframes)
3. See my playlist of Sessions provisioned to me
4. View Session profiles to align my purpose, neuro needs, duration, and benefits so that I can choose what to play
5. View a Regiment or Protocol assigned to me and the Sessions within that Regiment
6. Stream and control playback with confidence.

7. Trust that my data is handled responsibly and that I can request support when needed.

Listener Acceptance Criteria:

- I can log in and understand how I am to use Sonocea
- View Sessions available to me and/or find a recommended session,
- Start playback quickly, and finish without errors.

Section 6: Out-of-Scope for v1.0

The following items are out of scope for v1.0, but may be scoped in future versions:

- Direct-to-consumer, open sign-up via app stores (with the exceptions identified in the [General Public PRD](#))
- The ability for Partners to invite, manage their own Listeners
- Household sub-profiles (for minors)
- Gamification and/or multi-day or multi-week listening regiment or protocol
- External white-label integrations
- Listener recommendation engine
- Health platform integrations and wearables
- In-app referrals beyond a simple web form link
- Session Groups beyond neurotype by genre, neurotype
- Having multiple types of Partners
- Partners receive monthly auto-generated reports of usage
- Partners can create custom instructions (i.e. a protocol) for specific Listeners and it is displayed via the app to the Listener.
- Partners can create groups of Listeners to facilitate a regiment or protocol for multiple Listeners to save from provisioning access one-by-one.

Section 7: Functional Requirements

Authentication and Access

1. Unique invite links and/or pre-registered emails bound to Listener identity
2. One active device per account with server-side checks and re-provision flow.
3. Token-based auth with short-lived access tokens and refresh flow.
4. Admin ability to revoke access instantly within their scope.

Content Management System (Admin)

1. Upload audio file ("Session) and associated meta data / attributes;
 - a. title, description, duration, target audience (neurotype, age range, gender, use case / best for (ex. Starting your day, unwinding, destressing, etc.), benefits, tags, thumbnail image.
2. Versioning and replace-in-place with safe rollback.
3. Assignment matrix: Admin to Partner (or Organization) to Listener, Admin to Listener
4. Know the state of a given Listener: invited, active, paused, removed
5. Content: upload, edit metadata, Listener state control.
 - a. People: search, status, last login, revoke.
 - b. Partner/organization: Create a new organization,
6. View Dashboard: invites sent, accepted, first-play latency, top sessions, MAU and WAU, total hours, Partner-linked usage.
7. Create Partner, assign content bundles, set billing plan and rate card. Supported billing models include site license with seat pool, per seat pricing, and usage based pricing. Also, manage, edit, or delete an existing organization
8. Export CSV for session-level and Partner-level usage for billing purposes

Onboarding and Education

- One-time onboarding flow associates Listener to Partner, creates login (OAUTH), collects necessary listener information, and covers optimal listening guidance.
- About page linking to policies and company info.
- See [Public User PRD](#) for additional functional requirements

Playback

- Player controls: play or pause, scrubber, elapsed and remaining time, repeat one or continuous.
- Visualizations aligned with Sonocea branding.
- Respect device system focus settings to minimize interruptions.
- Secure streaming via encrypted URLs the prevent unauthorized access

Library & Discovery

- Library shows only provisioned content (Admin -> Partner -> Listener)
- Filters and sorting by meta data elements - duration, use case, benefits, etc.

- Session details articulate purpose, audience fit, benefits, and differentiators.

App & Session Feedback (Listener)

- Prompt Listeners for quick feedback after session completion with a lightweight rating and optional comment.
- Periodic in-app prompt to rate overall app experience or Session specific feedback.
- Respect frequency caps and provide a skip option.
- Store feedback with partner_id and content_id for analysis and billing insights when relevant.
- Feedback viewable in CMS or sent to Admin specified repository

Section 8: Data & Analytics

For this v1.0, we wish to collect the following insights:

1. Acquisition

- a. Invited vs accepted rate by overall and by Partner.
- b. Time from invite to first login.

2. Engagement

- a. Time from acceptance to first complete listen.
- b. First to second session latency.
- c. Frequency and duration per user over time.
- d. Session popularity and completion rates.
- e. User location derived from IP address
- f. Time-of-day patterns.
- g. Count of session listens by Listener, by Partner
- h. Count of session listens across all listeners and partners

3. Retention and Satisfaction

- a. Total listens per user.
- b. Total listening time by period and LTD.
- c. Frequency trend over time.
- d. Qualitative feedback submission for app and for specific Sessions

4. Partner and Billing Metrics

- a. Partner-level provisioning events and conversion funnel.
- b. Active Listeners per Partner by period.
- c. Total hours and completions per Partner and per Listener.

- d. Billable usage units per Partner as defined by plan rules such as active seat, active Listener, or billable minute or hour.
- e. Seat pool allocation and utilization for site license plans including included seats, consumed seats, peak concurrent seats, and overage seats if applicable.
- f. Per seat plans: count of billable active seats by period and effective rate. Usage based plans: usage metric totals by period with tiering rules applied.
- g. Exportable billing report per Partner for a selected date range with plan type, rate card, units, rates, subtotals, taxes if applicable, and totals.

5. Report Generation

- a. Ability to slice and dice the above data into reports or graphs for a specified period of time in aggregate and/or down to the individual Listener level.

Event Schema (examples, generated by AI)

- partner_created, partner_plan_updated, partner_bundle_assigned, rate_card_updated
- invite_sent, invite_accepted, login
- listener_provisioned with partner_id, method, and assigned_bundle
- session_view, play_start, play_progress, play_complete
- seat_allocated, seat_released, usage_metered
- feedback_prompt_shown, feedback_submitted_app, feedback_submitted_session
- export_billing_csv

Section 9: Non-Functional Requirements

Security and IP Protection

1. All traffic over TLS (transport layer security).
2. Authenticated, signed, time-limited content URLs.
3. Device-bound encrypted streaming playback with periodic license checks.
4. Jailbreak and root detection with graceful denial.
5. Disable OS-level recording APIs where possible and watermark playbacks with invisible telemetry signals.
6. Rapid remote revoke for users, Partners, and assets.

Performance

1. Playback starts within 1 second on good networks.
2. Target bit rate of 192 kb/second.
3. Additional buffering on poor connections
4. Background playback supported where platform policies allow.

Reliability

1. 99.5 percent monthly API uptime target
2. Crash reporting integrated and triaged.
3. No internet detected or low-bandwidth detection

Privacy and Compliance

1. Links to Privacy Policy and Terms in app.
2. Data minimization for PII, specifically avoid medical records data
3. Region-aware (USA, UK, EU, priority) storage decisions as needed
4. [Placeholder for security requirements: GDPR, CCPA, etc.]
 - a. Document data retention and deletion pathways.
 - b. Partner exports contain the minimum necessary data for billing and are signed

Accessibility

- VoiceOver and TalkBack readable UI.
- Scalable typography and sufficient contrast.

Brand Alignment

- Visuals, interactions, UX, is aligned to Sonocea brand system including “sound blends” animations.

--

Section 10: Technical Architecture (High Level)

- **Clients:** iOS and Android cross-platform framework (ex. React)
- **API:** REST service with auth, entitlement, catalog, telemetry, signed URL issuance endpoints
- **Storage:** Object storage for audio and thumbnails, KMS for key management
- **DB:** Relational core for users, invites, Partners, entitlements, events, and billing facts - see Appendix for current solution.
- **CDN:** Edge delivery with tokenized URLs

- **Admin CMS:** Web app backed by API with role-based Admin and Partner scopes
- **Analytics:** Event collector to data store plus lightweight dashboard and billing CSV exporter

Data Models (Essential Items)

- **Listener:** id, OAUTH attributes and/or email, phone, role, status, device binding, last login, partner_id, neuro_type,
- **Partner:** id, name, plan_type, rate_card_id, billing_contact, included_seats, usage_metric, tiering_rules, status
- **Invite:** code, target user, partner_id optional, status, created, expires
- **Content:** id, title, description, duration, tags (neurotype, age range, gender, use, symptoms, etc.), audience, file refs, state,
- **Provisioning:** user or group or partner_bundle reference, content id, start, end
- **ProvisioningEvent:** id, partner_id, user_id, method, timestamp, bundle_id
- **UsageRecord:** user_id, partner_id, content_id, play_start, play_end, complete flag, seconds_listened, billable_units derived
- (optional) **RateCard:** id, plan_type enum site_license, per_seat, usage; currency, seat_price, included_seats, overage_seat_price, usage_metric enum minutes, hours, completions, usage_tiers optional
 - **BillingAccount:** partner_id, rate_card_id, invoice_cadence, tax_profile
 - **Invoice:** id, partner_id, period_start, period_end, line_items, subtotal, tax, total, status

Section 11: Key Milestones (rough outline)

- ☐ PRD sign-off
- ☐ UX pass and design review
- ☐ API scaffolding including Partner, billing, and rate card tables
Click-through Prototype
- ☐ Admin CMS / data dashboard updates: invites, content upload, entitlements, Partners, plan configuration
- ☐ Interim WIP Build Schedule [to be co-scheduled with developers]:
 - ☐ Working Prototype: auth, library, player, basic analytics
 - ☐ Pilot build and internal QA
- ☐ Billing model implementation: site license seat pool, per seat metering, usage metering and tiering, CSV or invoice export

- ☐ Integration hardening: revoke flows, crash reporting
- ☐ Pilot with selected Partners and analytics or billing readout
- ☐ Post-pilot improvements and v1.0 release on app store

Section 12: Draft Test Plan

(to be co-created with developers)

- Structured manual QA passes: developer, designer, Sonocea core, Partner test group.
- Test matrices for devices, OS versions, network states, and offline behavior.
- Security checks: jailbreak or root detection, content leak attempts, token expiry behavior.
- Analytics validation of Partner provisioning and billing exports.
- Accessibility checks with screen readers and large text.

Section 13: Risks & Mitigations

1. **Content leakage** harms IP.
 - a. Mitigation: Encrypted storage, signed URLs, device binding, rapid revoke, monitoring.
2. **Billing disputes** due to unclear metrics.
 - a. Mitigation: Define billable units, surface Partner-visible tallies, signed CSV exports.
3. **Store policy friction** for distribution
 - a. Mitigation: Use private tracks and enterprise or beta channels where eligible.

Section 14: Planned Future Versions (tentative)

v1.1:

- **Admin:** Richer analytics and visualizations
- **Partner:**
 - Create and customize groups of Listeners, assign Sessions to that Group
 - Create/customize Regiments for specific Listeners
 - Richer analytics and visualizations about their Listeners

- Bulk sending of Listener invites
- An “office” license of Sonocea that allows Partners to see their fully playlist regardless of neurotype
- **Listener:**
 - **Priority Feature: Household sub-profiles (ex. for minors) immediately after v 1.0 release**
 - Notification systems, favoriting/bookmarking of sessions.

v1.2:

- **Admin:** A/B testing capability, white-label capability (?)
- **Partner:**
 - Partners receive monthly reports of usage.
 - Partners can create custom written or video instructions for specific Listeners or Listener groups and it is displayed via the app.
- **Listener:**
 - Sessions adapt based on Listener preferences (ex. genre)
 - Gamification and/or multi-day or multi-week listening regiment or protocol

v1.3:

- **Admin:** TBD
- **Partner:** Having multiple types of Partners (ex. Clinicians, athletics, military, etc.)
- **Listener:** Wearables integration

v2.0:

- **Admin:** Direct-to-consumer Offering with in-app purchasing
- **Partner:** Differentiated solutions, pricing for Partners vs. D2C Listeners
- **Listener:**
 - AI generated Sessions based on Listener attributes, preferences, specific needs/use cases.
 - AI driven Listener recommendation engine
 - In-app referrals beyond a simple web form link

Section 16: Selected Acceptance Criteria

Auth and Invites

- Listeners can redeem a unique invite link or Partner code and log in successfully.
- Admin and Partner can resend or revoke invites and see real-time status within scope.

Content Security

- Streams fail outside signed URL validity.
- Sessions are unplayable outside the app or after revoking access.

Playback

- Play starts reliably, shows progress, and respects repeat settings.
- Visualizations animate without stutter on reference devices.

Analytics

- Dashboard reflects invite acceptance, first play latency, total hours, top content, and Partner-linked usage.
- Billing export provides Partner-level rows with Listener counts, seat utilization if applicable, billable units, rates, and totals according to the Partner plan.
- Reconciliation tests demonstrate that exported billing totals match sampled raw events and seat snapshots within a 1 percent variance for each supported model.

Feedback

- After completion, eligible Listeners see a feedback prompt no more than once per day, and submitted feedback appears in analytics segmented by Partner and content.
- App experience rating prompt appears at a configurable cadence and respects skips.

Stability

- No blocker or critical bugs in pilot build across the target device list for one week.

Appendix A - Example Commercialization Rate Cards & Billing

Example 1: Site License with Seat Pool

- Plan type: site_license

- Currency: USD
- Period: monthly
- Included seats: 100
- Flat fee: \$8,000
- Overage seat price: 100 per seat above included seats
- Caps and proration: pro-rate on mid-period activation after day 15 at 50 percent
- Effective dates: Jan 1, 2026 onward

Example 2: Per Seat

- Plan type: per_seat
- Currency: USD
- Period: monthly
- Unit price: 120 per active seat
- Tiers: 1 to 199 seats = 120, 200 to 499 = 105, 500 plus = 95
- Minimum commit: 50 active seats
- Effective dates: Jan 1, 2026 onward

Example 3: Usage Based

- Plan type: usage
- Currency: USD
- Period: monthly
- Metric: hours_listened
- Tiers: 0 to 500 hours = 6 per hour, 501 to 2,000 = 4, 2,001 plus = 3
- Monthly minimum: 2,000
- Effective dates: Jan 1, 2026 onward

Billing CSV Schemas (AI generated)

Common Header Fields:

partner_id, partner_name, period_start, period_end, currency, plan_type, rate_card_version

Seat License CSV Columns:

included_seats, seats_used, peak_concurrent_seats, overage_seats, flat_fee, overage_seat_price, subtotal, tax, total

Per Seat CSV Columns:

active_seats_billed, tier_name, unit_price, subtotal, tax, total

Usage Based CSV Columns:

usage_metric such as hours or minutes, usage_units_billed, tier_name, unit_price, subtotal, tax, total

Optional Detail Export:

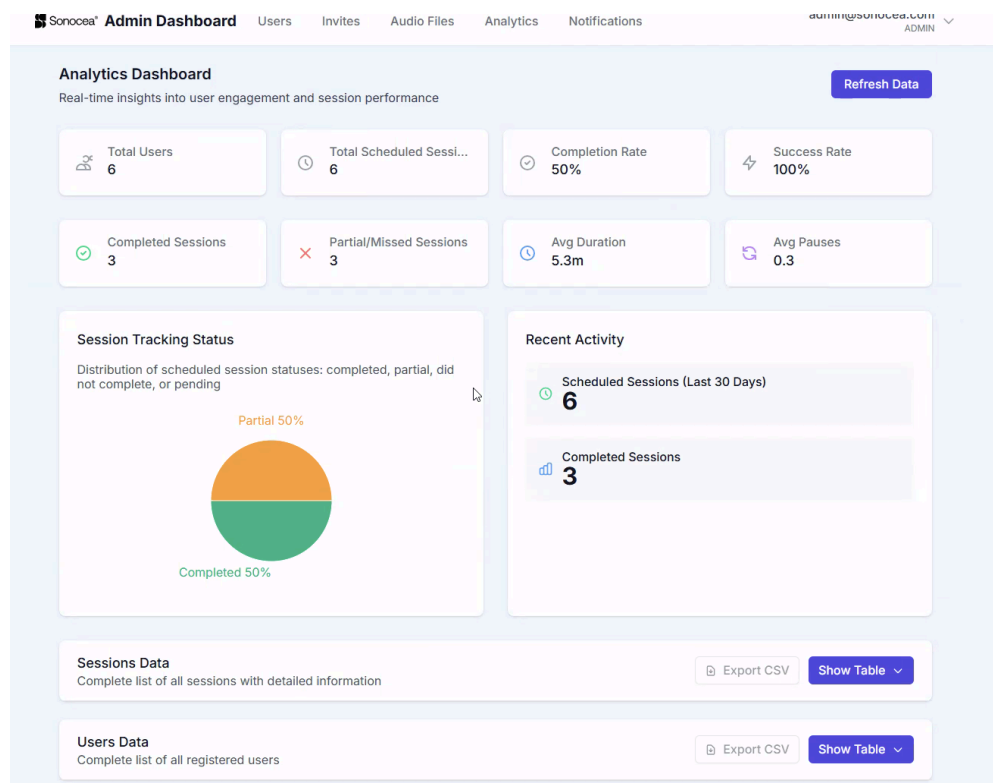

listener_id, listener_email masked, content_id, seconds_listened, completed flag, device_type, billable_units derived

Appendix B - Listener Use Cases, Existing List of Sessions, Planned Use Cases and Sessions

[To be updated]

Appendix C - Data Dashboard

The current data dashboard is written on XJS with Sawa for front-end and AWS for hosting. Below is a screenshot of the current main dashboard page.

Appendix D - Product Implications of Clinical Use Cases

Below is a summary of the various clinical use cases that Sonocea Sessions will be applied to. This is a reference to developers and designers to have insights into how the Sessions are being used by Partners and Listeners.

TLDR: Summary design and engineering implications of various applications:

- **The Admin → Partner → Listener:** model must support highly tailored bundles per care pathway, with some content restricted to professional use only.
- **Session metadata:** (duration, neurotype, age range, use case, setting, benefits) is critical to discovery and to safe deployment in clinical workflows.
- **Low attention and high stress environments:** (theatre back rooms, infusion chairs, hospice beds, night feeds), so UI should minimize steps to “press play,” and background playback, and degrade gracefully on weak networks.
- **Direct Listener use and Facilitated use:** (therapist or nurse choosing what to play), so UX should work whether the phone is in the patient’s hand or effectively acting as a “clinical tool” controlled by staff.

Detailed Overview (for Reference purposes)

Sonocea Sonic Augmentation Technology (SAT) is a precision-composed audio intervention that produces rapid, measurable improvements in autonomic and emotional regulation, including increased oxytocin, reduced anxiety and pain, and enhanced calm. In the app, SAT is always experienced as structured “Sessions” whose length, framing, and assignment must align with specific clinical or life contexts.

For v1.0, the same core platform must flex across seven primary use case families, each with a distinct “Primary User” (who controls access) and “End User” (who listens):

1. Regulation Companion (2.a)
 - a. Primary user: Therapists in-session
 - b. End user: Clients (aka Listener)
 - c. Implications: Simple, low-friction playback in therapy settings; shorter sessions (around 15 minutes), easy replays, and clear labeling for “arrive,” “settle,” and “access therapy” use.

2. Inner Balance (2.b)
 - a. Primary user/end user: Therapists themselves (Partner & Listener is same)
 - b. Implications: Partner bundles that include therapist-only content not visible to clients; sessions optimized for use between appointments, on-call, or post-shift; parity with Listener UX but with “self-care” framing.
3. Pre-Procedure and Treatment Suites (2.c)
 - a. Primary user: Hospitals and medical teams
 - b. End user: Patients undergoing procedures or oncology treatments
 - c. Implications: Sessions grouped by phase of care (arrive, prepare, endure); multiple durations (10–45+ minutes) and support for extended or continuous playback in waiting rooms, pre-op bays, infusion chairs, and recovery areas. Hands-free, simple controls and robust poor-network behavior are critical.
4. Therapist Resource Platform (2.d)
 - a. Primary user: Therapists and helping professionals
 - b. End user: Therapist, optionally their clients (B2B2C)
 - c. Implications: Platform must support Partner-specific bundles that mix self-care content plus optional “shareable” client content. UX patterns such as “state menus” (Calm, Reset, Focus, Restore) and light reflective prompts can sit on top of the core session library and metadata model.
5. Neurodivergent Series (2.e)
 - a. Primary user: Parents, schools, clinicians, caregivers
 - b. End user: Children, adolescents, and adults, neurodivergent and neurotypical
 - c. Implications: Strong reliance on segmentation attributes (age bands, neurotype, support level) and clear labeling to help non-technical caregivers pick appropriate sessions quickly. Sessions available in at least 15 and 30 minute formats, with safe use in classrooms, homes, and therapy spaces.
6. Comfort and Transition Suite (2.f)
 - a. Primary user: Palliative and hospice teams, bedside carers
 - b. End user: Palliative, hospice, end-of-life patients and their families
 - c. Implications: Very gentle, ultra-slow SAT programs with the ability to run for long or continuous durations. Playback must be extremely simple, reliable, and non-intrusive (minimal screen interaction, dim displays). Multiple “modes” (Comfort, Peaceful Presence, Transition Support, Night, Family Connection) map to content tags and bundles that staff can recognize at a glance.

7. Postpartum Bond and Regulation Suite (2.g)

- a. Primary user: New mothers and birthing parents; postpartum caregivers
- b. End user: Mother plus infant (and close caregivers)
- c. Implications: Sessions organized by postpartum context (feeding, skin-to-skin, nighttime settling, NICU bonding). App flows must be friendly to sleep-deprived users: fast access to “go-to” sessions, one-hand operation playback in homes, wards, and neonatal units.
